

Born from Racing

From Pit Lane...

The majority of performance/luxury car owners will have heard of race teams "scrubbing" their tyres to enhance their performance, giving better handling, better grip, better feel, better ride and in most cases better longevity. Heat Cycling – scrubbing – was traditionally performed at the track, was expensive and not very accurate. Tyre Technology (heat) Ltd developed a new patented system, which was easier, cheaper and gave far better results.

Better Safety
Better Handling
Better Grip
Better Performance
Better Feel
Better Comfort
Better Longevity

...To Country Lane

Today we can offer the same benefits we give to competition cars, to standard road performance and luxury vehicles. Like many other great innovations conceived in motor sport, this revolutionary service has finally percolated into the public domain.
